Studied scripts

In the Aramaic and Arabic script variants calligraphic influences fully survive, and glyphs are intended to reproduce cursive handwriting (Baird 2014). The two most important varieties of Arabic script are the Kufic and the Nashk (Taylor 1883, Vol. I: 317–318); the Kufic is square and monumental, it has practically fallen into disuse since the 14th c., and the Nashk is the cursive Arabic script in which books and newspapers are printed. There are several altering classifications of varieties of the Arabic scripts with different names, e.g., African (Fry 1799: 8), Qarmatians (Carmatic, Karmathian, used in the north of Arabia); Diwani (Divân, Diwānī, used during the age of the early Ottoman Turks); Jeli Thuluth (used for stones and buildings); Kufic (Cufic, Kufic, Kufi, is the earliest calligraphic variety of the Arabic script), Maghrebi (Mağribī, was developed in North Africa and Al-Andalus [Iberia]); Mauritanian (used in Morocco, Fez and North Africa); Naskh (Nischi, Nash, Nesh, Nesih, Neshkhi, used for text processing); Nastaliq (Nasta‘līq, Nashk-i-ta‘līq, used for Persian, Punjabi and Urdu languages); Reqa‘ (used for private correspondence); Ruq‘ah (Ruq‘ā, Riq‘a, Rika‘a), Taliq (Ta‘līq, Ta‘alīq, used for the Persian language) and Thuluth (Sulsi, Tuluṭ, Thulth, Sülüs, used for ornamental purposes) (Fry 1799: 7; Milo 2002: 114, 122; Milo 2013; Shahzad 2020: 1). These categories partly overlap with each other. The Arabic script also has national subvariants, differing chiefly in the number of graphemes, e.g., Afghan, Hindustani, Malay, Persian and Turkish. Each of them contains additional graphemes to express the peculiar sounds of these languages. Only some selected Arabic script varieties are involved in the current research, namely, the so-called early, African, Kufic, Mauritanian, modern and Naskh. Some historical data of the examined taxa are listed in Table 1, where the order of the scripts corresponds to the time of their first known appearance.

Table 1: The scripts under study

Scripts (in some cases the script variants are individual taxa)	Use of time (approximately)	Area of use (not later than the 1 st millenium AD, approximately)
Old Aramaic	9 th –7 th /6 th c. BC	Middle-East
Imperial Aramaic (Official Aramaic)	7 th /6 th –1 st c. BC	Egypt, Middle East, Inner Asia, Iran
Hebrew (quadratic)	3 rd c. BC – present	Middle East
Parthian	2 nd c. BC – 3 rd c. AD	Inner Asia, Iran
Nabataean	2 nd c. BC – 4 th c. AD	Middle East
Middle Persian	2 nd c. BC – 7 th c. AD	Inner Asia, Iran
Palmyrene	1 st c. BC – 3 rd c. AD	Middle East
Hatran (Ashurian Aramaic)	1 st c. BC – 3 rd c. AD	Middle East
Syriac (taxa: Syriac-Estrangela, Syriac-Nestorian)	1 st c. AD – present	Middle-East, Inner Asia, Iran
Armazian	1 st –2 nd c. AD	Georgia
Khwarazmian	1 st /2 nd c. AD – late 7 th /8 th c.	Inner-Asia
Sogdian	2 nd –13 th c. AD	Inner-Asia

Scripts (in some cases the script variants are individual taxa)	Use of time (approximately)	Area of use (not later than the 1 st millenium AD, approximately)
Arabic (taxa: Arabic-African, Arabic-early, Arabic-Kufic, Arabic-Mauritanian, Arabic-modern, Arabic-Naskh)	5 th /6 th c. AD – present	Africa, Iberian-peninsula, Middle East, Inner Asia, Iran

The dataset

The examined taxa features are extracted based on the collections of similar features of the script variants. These collections are called Similarity Features Groups (SFGs), and the purpose of their construction is to avoid the random coincidence of evolutionary unrelated but similar features (Hosszú 2017: 182). The SFGs used in the present analysis are described in Table 2, where the order of the scripts is the same as in Table 1.
